The Master Plan for the University of Miami's Rosenstiel School of Marine & Atmospheric Sciences consolidates disparate existing departments and creates a centralized campus identity, focused around a main quad, which provides indigenous landscaping, views of Biscayne Bay, and captures ocean breezes, while respecting the boundaries of adjacent wetlands and historic properties. We have also recently completed programming and conceptual design for the new Saltwater Laboratory Building, a 40,000 sf state-of-the-art research facility that will combine all saltwater research components of numerous University Departments. The building will house laboratories, support spaces and offices as well as the world-famous Aplysia Hatchery and FLUME. CSP utilized a team/ charette approach to successfully fast-track this effort and integrate the needs of the Faculty, Administration and Facilities Management.
